

# Your Workforce & COVID-19

## Taking Steps Today for a Safer Workforce Tomorrow

If COVID-19 testing is part of your plan to get employees back to work, we can help.

As we all look to the future, we know testing for coronavirus SARS-CoV-2 is part of the solution for getting America's workforce back in action. Forging a path forward for your business and employees is part of that equation.

Viracor's clinical diagnostic testing can help you make more informed decisions for how and when to get employees back to work. RT-PCR viral testing is used to diagnose active infection; Antibody IgG and IgM testing can help identify antibody response to the virus after infection. Additionally, antibody testing can identify people that were exposed to the virus and may have developed some level of immunity, but experienced only mild to no symptoms.

### RT-PCR Viral Testing

Order Code: 8398

### IgG and IgM Antibody Testing

Order Code: 403607P

Check to see if employee has COVID-19	<b>RT-PCR</b> Viral testing detects active infection
Check to see if employee is fighting COVID-19	<b>IgM antibodies</b> IgM antibody levels rapidly increase within 3-7 days after viral infection
Check to see if employee has been exposed to COVID-19	<b>IgG antibodies</b> IgG antibody levels rise within 10-17 days and persist, indicating potential immunity

## Safety. Accuracy. Quality.

- 35 years of expertise developing innovative infectious disease testing
- Trusted by premier transplant centers and academic hospitals
- Highest quality: CAP & CLIA accredited
